## Towel rails

### Practical everyday luxury

FOR A GREAT INDOORS  
[www.pax.se](http://www.pax.se)

# Imagine always having a dry, nice and warm towel after you shower.

Everyday luxury becomes a reality with a towel rail from PAX. At the same time, the towel rail helps to prevent moisture and mould problems. Creating a better environment for both you and your house.

## Is it expensive to have the towel rail on all the time?

Not at all! Towel rails from PAX use the same amount of energy as a normal light bulb. Also, there is one model with an energy-saving function. (Read more about PAX TRS 60/accessories)

## Which model is best, water-borne or electric towel rail?

In the PAX range of electric, liquid-free towel rails, heat is generated via a heating cable. Therefore, it is independent of if other heating/warm water systems in house are in operation.

## But during the summer, won't the towel dry quickly anyway, without the towel rail?

On the contrary! It's during the summer that the towel rail is at its very best. Humidity is normally higher in the summer.

## How should towel rails be placed for good drying?

Good drying performance is obtained by folding the towel with about 15 cm overhang around the tube. At the same time, the family's towels are within easy reach.

## Does the moisture disappear when the towel is put on the rail?

No, the water evaporates due to the heat from the towel rail. Then the moist air should be removed from

the room through an extract fan. Why not with a moisture-controlled fan from PAX?

Bathroom – warm, dry towels after you shower

Utility room – perfect for drying laundry

Lobby hallway – wet hats and mittens dry faster

## TR-series

PAX TR-series is available in three different sizes. This model is intended for wall mounting.

The unique connection housing gives several alternatives for electrical connection. With plug and connecting cable to a power outlet, or with an existing connection box. Or with an elegant concealed electric connection, where the connecting cable is not visible.

Thanks to the towel rail's wall brackets, the TR-model can be turned and installed with the electric connection up or down, to the right or left side.

Switch operation, on and off incorporating a built-in indicator light.

Concealed electric connection

Connection with plug

## TRS-series

PAX TRS 60 is a swing-out, modern design towel rail. The ingenious design of steel tubing with easily installed wall bracket gives very solid anchoring against the wall surface.

Electrical connection to wall outlet with connecting cable and plug. Cable exit from wall bracket can be selected, upward or downward.

The shape of the wall bracket also enables discrete concealed electrical connection. Switch operation, on and off incorporating a built-in indicator light.

Electronic automatic control, which can be built in, is available as accessory. The control card, which is integrated in the TRS-series' wall bracket, provides a smart energy-saving function with a timer or temperature-control.
